

Nothing Software

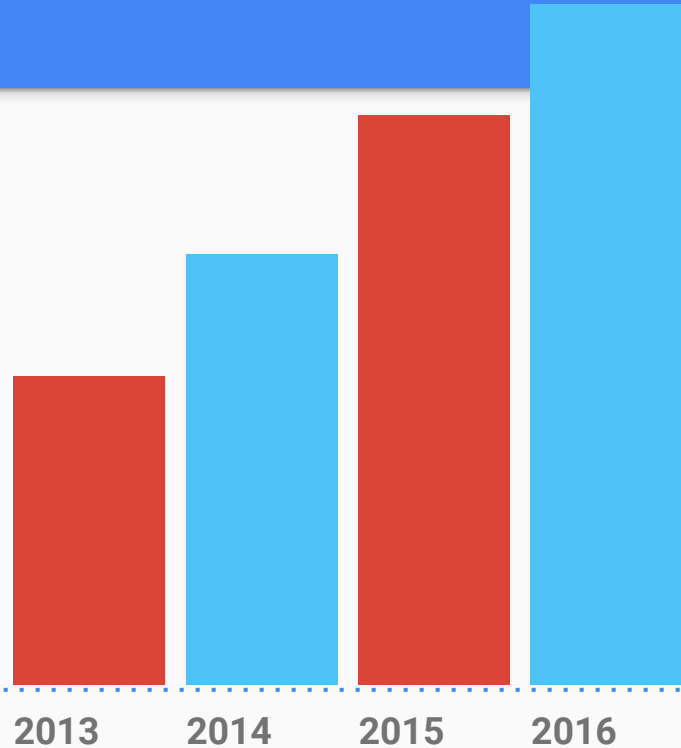

We have 'nothing' to offer

Mission statement:
Moving toward the
future, one app at a
time

The problem

Bargain hunters and garage sale enthusiasts need their own app to help save time when they are out looking for deals and steals at yard sales.

Graph: Growth of Android users

A close-up photograph of a person's hand, wearing a dark sleeve, pointing their index finger towards a table. On the table, there is a pen and a small, light-colored object. The background is out of focus, showing what appears to be a garage sale or a similar outdoor market setting with various items and a blurred car in the distance.

The solution

The Garage Hunter app will be aimed at helping people search hundreds of nearby garage sales to locate the best item for the best price.

Objectives:

The objective for this project is to allow users to search for garage sales anywhere they want.

This app aims to replace the act of wandering your neighborhood looking for garage or yard sale flyers. It also would ideally be a better alternative to mobile users who don't want to use a 3rd-party Craigslist Android app or the Craigslist site on their mobile browser.

Research Findings:

Lots of people who aren't avid garage sale hunters have failed to see the difference between using my app and just using Craigslist in general, but there were people who saw the value in the convenience my app offers.

These people considered themselves bargain hunters who were always looking for garage sales to see if there is anything they need that they can get for a deal.

Target Audience:

My ideal target audience are people who are obsessed with the hunt of searching for used or antique items. They also enjoy the thrill of negotiating and haggling prices.

These people generally will spend a certain amount of hours (usually on the weekend) looking for garage sales that have items that they need. They also could be looking for undervalued items that they hope to get cheap and then flip for a profit.

Features:

- *Google Maps API*
- *Firebase Cloud Server*
- *3rd Party Library: Picasso*
- *ViewPager with Fragments*

Pain Points:

This app aims to be more convenient and faster to use than competitor apps. It also attempts to pick and pull the best features from all competitors to create a simple yet robust experience that does everything that the user needs and nothing that they don't.

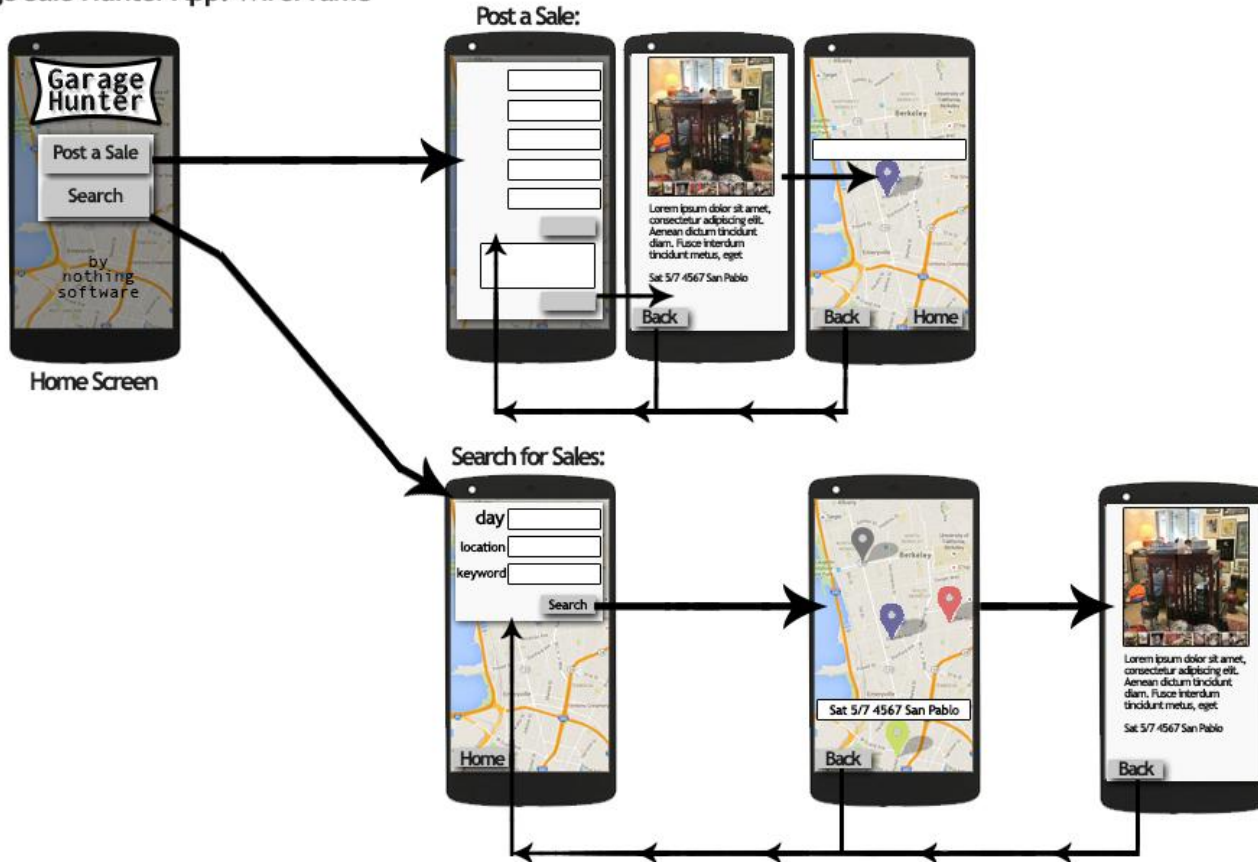

Constraints:

It appears that there is currently no Craigslist API so that will make this more difficult.

Garage Sale Hunter App: WireFrame

Nicolas Saad

How it works

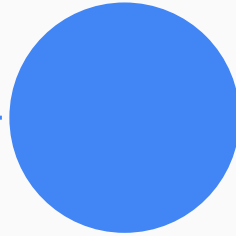

Step 1

User searches for a sale or posts one themselves.

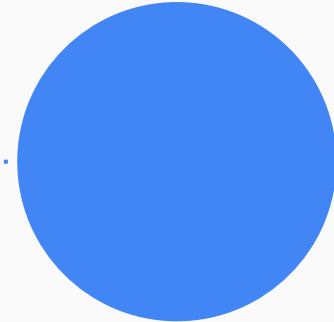

Step 2

User finds a worthwhile yard sale a few blocks or many miles away

Step 3

User now knows about a sale that they wouldn't have found without the app

An aerial, high-angle view of the New York City skyline at dusk. The sky is a mix of deep purple, blue, and orange, with scattered clouds. The city is densely packed with skyscrapers, many of which are illuminated with their interior lights. The Empire State Building is prominent in the center, with its top lit in red and green. To the right, the dark, angular structure of the Hearst Tower is visible. In the background, the Hudson River and the New York Harbor are visible, with the Manhattan Bridge and other bridges spanning the water. The overall atmosphere is one of a bustling city at the end of the day.

The End
